TRACE CRYSTAL S.À R.L.

DESCRIPTION

We develop physical unclonable fingerprint tags for secure, tamper-proof product authentication. Our mission is to protect supply chains and consumers by making every product uniquely verifiable—without electronics, batteries, or connectivity. Our technology applies to pharmaceuticals, luxury goods, art and other sectors, where counterfeiting and traceability are critical. Unlike QR codes or holograms, which can be copied or manipulated, our tags are physically unique and impossible to replicate. We serve B2B clients—manufacturers, regulators, and distributors—seeking robust, scalable anti-counterfeiting solutions across regulated and high-value markets.
