CRAB TRACEABILITY SYSTEMS S.À R.L.-S

DESCRIPTION

Our innovative tool creates digital models of local recycling facilities, allowing companies to simulate how their products will perform at the end of their life cycle. We use AI to collect real data on how materials are handled during recycling (CircuCheck), track resource flows between different companies (CircuMap), and evaluate how well product designs meet end-of-life requirements (CircuDesign). All of this is done with complete data security through secure, black-box simulations, with optional data sharing between trusted partners.
