PHOENIX TECHNOLOGIES S.A.

DESCRIPTION

Our activity is divided into two main areas: 1. engineering consulting services in the field of blast furnaces, with the main target being the extension of the lifespan of blast furnaces (ranging from actual process and technology consulting, conceptual studies, basic engineering); 2. project management services, with the aim of helping our steel clients to organize and manage their projects (blast furnace refurbishments, major DRI-EAF transformation projects, and any other steel modernization projects).
