JOB TITLE

API Developer

FUNCTIONS

As API developer (technical), your main tasks will be to:

- *Design and develop APIs in multiple protocols and standards to satisfy our customer needs*
- *Actively participate to the analysis and integration of MuleSoft platform for our clients*
- *Help with the setup of the major technical components necessary for a smooth project delivery (Environments, VPN, BitBucket, git, Maven, ect.) while complying with the security best practises*
- *Participate in clients workshops on integration (security, continuous integration, performance, ect.)*
- *Ensure the delivery of quality developments for our clients through technical audits and controls*

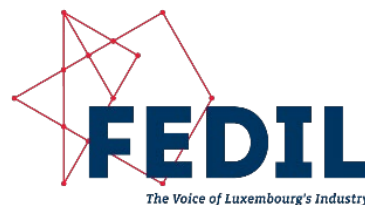

You will receive an onboarding training in our training center from our in-house expert. Moreover, throughout your career at Cap4 Lab, you will beneficiate from continuous training.

QUALIFICATIONS

- *Very good knowledge of JAVA development*
- *Familiar with Git and version control or CI/CD pipeline*
- *Familiar with RESTful APIs and services and/or expertise in APIs (synchronous, asynchronous, sub-systems orchestration, etc..) combined with the capacity to promote microservices / API led connectivity approach and design-first approach (RAML/OpenAPI)*
- *Knowledge of the security best practises is an asset*
- *Knowledge of log management tools is an asset*
- *You are a pragmatic, flexible, proactive, structured and quality oriented team player*
- *You speak fluently in English*
